Sheila:

Please find attached the "current" plan. Not to get buried in the weeds, this plan is based on monitoring a large expanse of unlined trenches, which EPA generally takes the position are not even subject to RCRA (or authorized state dangerous waste) groundwater monitoring requirements. The two mixed waste trenches that are the subject of my inquiry aren't even identified in the Plan (could this be a problem?) - the two mixed waste trenches/landfills are actually located in the far southern tip of the 218-W-5 burial ground.

Dave
